

# AI-Powered Email Outreach Application

Architecture · [phased delivery](#) · [interactive demo](#)

Modular outreach system: CSV import, AI-personalized disclosure emails, human approval before send, inbound reply tracking, 14-day follow-up, multi-campaign dashboard — built for reuse across campaigns, topics, and audiences.

## YOUR REQUIREMENTS → HOW WE DELIVER

| Your spec                                   | Delivery                                                    | Phase        |
|---------------------------------------------|-------------------------------------------------------------|--------------|
| Import contacts (CSV / data sources)        | CSV upload + column mapping; API hook in M4                 | <b>M1</b>    |
| AI-personalized outreach emails             | Claude/OpenAI · structured JSON · prompt per campaign       | <b>M1</b>    |
| Enrichment (website, company data)          | CSV fields + optional public URL fetch · no LinkedIn scrape | <b>M4</b>    |
| Review · edit · approve before send         | Next.js dashboard (see live demo)                           | <b>M1</b>    |
| Send approved emails automatically          | SMTP / Gmail via n8n queue · approved-only gate             | <b>M1</b>    |
| Monitor inbound replies                     | IMAP/webhook parser → status = Replied                      | <b>M2</b>    |
| 14-day follow-up if no reply                | Scheduler + AI follow-up draft + approval                   | <b>M2</b>    |
| Dashboard (Draft / Sent / Replied...)       | Full status board + campaign KPIs                           | <b>M3</b>    |
| Multiple campaigns · modular extensibility  | Campaign model · prompt templates · plugin hooks            | <b>M3–M4</b> |
| Source code · docs · deployment · ownership | Repo handoff · runbook · Loom · Docker deploy               | <b>M4</b>    |

## ARCHITECTURE

CSV import → PostgreSQL (contacts, campaigns, audit)  
→ Enrichment (CSV + optional website text)  
→ LLM (Claude primary) → structured subject + body + rationale  
→ Review UI: Draft → Edit → Approve → Reject  
→ n8n: send queue (approved only) → SMTP/Gmail  
→ Inbound parser → Replied  
→ Day-14 cron → follow-up draft → approval → send  
→ Dashboard + exportable audit log

### Stack (matches your brief)

- **n8n** — workflows, cron, webhooks, retries
- **Claude / OpenAI** — personalization + follow-ups
- **FastAPI + PostgreSQL** — state + audit
- **Next.js** — approval UI your team uses daily

### Switzerland / EU

- Human approval default — nothing sends unattended
- No LinkedIn scraping (ToS + nDSG/GDPR risk)
- Audit trail per contact · campaign · send
- German UI labels available from M3 if needed

**On the \$400 fixed budget:** Your job post describes a full production app (~80–120 h). I won't deliver a brittle template at that price — you'll get something unmaintainable or unfinished. Instead: **fund M1 first**, use it immediately, expand only after sign-off. Phases and pricing on page 2.

Phased fixed-price delivery

Milestones — full spec covered

Pay per phase. Stop after any milestone if the app meets your needs. Total for complete spec: **\$3,450**.

| Phase                     | Price                                       | Days | You get                                                                                            |
|---------------------------|---------------------------------------------|------|----------------------------------------------------------------------------------------------------|
| M1 — Core loop ★          | \$950                                       | 7–9  | CSV · 1 campaign · AI drafts · <b>approval UI</b> · SMTP send · PostgreSQL · staging deploy · docs |
| M2 — Inbox + follow-up    | \$900                                       | 6–8  | Reply detection · 14-day follow-up · approval gate · scheduler                                     |
| M3 — Multi-campaign       | \$850                                       | 5–7  | Multiple campaigns · prompts per campaign · full status dashboard · n8n export                     |
| M4 — Enrichment + handoff | \$750                                       | 4–6  | Website enrichment · plugin architecture · full source transfer · runbook · Loom training          |
| Total                     | \$3,450 · full ownership · ~4 weeks elapsed |      |                                                                                                    |

M1 ACCEPTANCE CHECKLIST (SIGN-OFF CRITERIA)

| # | Test          | Pass when                                                          |
|---|---------------|--------------------------------------------------------------------|
| 1 | CSV import    | ≥50 contacts imported with mapped columns                          |
| 2 | AI draft      | Claude generates subject + body from contact row + campaign prompt |
| 3 | Approval gate | Unapproved emails cannot send                                      |
| 4 | Send          | Approved email delivers via your SMTP/Gmail on staging             |
| 5 | Audit         | Every action logged with timestamp + user + status                 |
| 6 | Handoff       | Repo + env docs + 5-min Loom walkthrough                           |

**Recommendation:** Start with **M1 (\$950)**. You have a working tool in ~1 week. M2 adds the reply/follow-up automation from your spec. No need to fund the full \$3,450 upfront.

ALTERNATIVE

Hourly **\$42/hr** with cap **\$3,800**, same milestones — if you prefer weekly visibility over fixed blocks.

M1 schedule (from funding)

| Day | Deliverable                                      |
|-----|--------------------------------------------------|
| 1–2 | Schema · CSV import · campaign + prompt model    |
| 3–5 | Approval UI · edit flow · SMTP · staging deploy  |
| 6–7 | 3 real contacts end-to-end · fixes · docs + Loom |

WHAT I NEED FROM YOU TO START

- Sample CSV (or anonymized export) + 2–3 example emails that worked well
- SMTP/Gmail credentials (staging) + Claude or OpenAI API key
- Campaign copy guidelines (tone, disclosure rules, forbidden claims)
- Confirm: German UI in M1, or English OK for v1?

RELEVANT EXPERIENCE

- Production outbound with **human-in-the-loop + audit** before any external send
- CRM AI classification — structured JSON, reason codes, real business rules
- Regulated AI (EU hospital) — fail-closed, nothing ships unapproved
- Demo: [agent-engineering-demo](#)

WORKING MODEL

- Async-first — Loom + written updates; no standing calls required
- You own 100% of code after each milestone
- Long-term partner mindset — same phased rhythm as your prior AI builds on Upwork

M1 · \$950

Recommended start · full spec = \$3,450 across 4 phases
